## Career Paths of Physics Degree Holders

Joseph Smith  
Assistant Professor of Physics  
Marietta College

Physics degree holders are highly employable in both the private and public sectors. However, students and early career scientists are often unaware of the types of career paths available to them. This talk will provide data on the number of physics degree holders and where they typically find employment, give examples of common career paths, and highlight career resources useful for exploring options and searching for and applying to jobs. The speaker will also discuss his own career path starting as a student at the College of Wooster to his current role as an Assistant Professor of Physics.
