Voyage of Discovery:

The Planetary Wonders of Our Solar System and  
NASA's Upcoming Missions to  
Explore Them

Dr. Sara Port

NASA Glenn Research Center

For centuries, scientists have sought to unlock the mysteries of the planets and moons in our solar system. The advancement of technology in recent decades has addressed some of these questions; however, we have merely scratched the surface of understanding our celestial neighbors. In this presentation, we will discuss the upcoming NASA missions to unveil the secrets of our solar system's planets, moons, and asteroids. We will delve into the unique characteristics of these celestial worlds and the scientific goals aimed at unraveling their mysteries.
