

11 LEFT TURNS MAKE A RIGHT

I don't see the point in doing anything unless it's in service to a 10 year plan. This mindset has led to amazing opportunities for me, but truth be told, I am not even close to where I thought I would be 10 years ago. "Things rarely go according to plan, but things end up how they're supposed to." How often has this advice been repeated when things go awry? From dropping out of college to applying to graduate school twice to earning a PhD in Astronomy and using it to study the atmosphere, I can comfortably say that these phrases are not platitudes. In honor of experiencing these wisdoms first hand, and with the understanding that present circumstances feel more uncertain than ever, I will tell the story of my successfully failed 10 year plan.
